In Which Black Humor Gets A Vivisection

Abstract
In lieu of an abstract, below is the essay's first paragraph.

"The black humorist wears many hats, but the one that appears to fit him best is that of the caricaturist. Using words as his medium, the black humorist paints society larger than life to make a topical comment. The tragedy of us moderns is that the black humorist must really labor to paint surrealistically, to outstrip real-life phenomena in distortion: today, the grotesques of Bosch pale beside Polaroid snapshots of That Day in Dallas."

Appeared in the issue: Spring 1969.
The black humorist wears many hats, but the one that appears to fit him best is that of the caricaturist. Using words as his medium, the black humorist paints society larger than life to make a topical comment. The tragedy is intent. Surely, the black humorist does impose optics of conventional morality, fade into the humorist’s wonted black. His stark treating of “taboo’d” material, his erasing the line between fact and fantasy, and his oversimplifying, tend toward the social inquisition determined to root out and destroy pornography, it would be found to be noticed, must dredge pits of offal and parade the findings; but this is exactly the black humorist’s rationale.

While one of society’s tragic flaws is an exceedingly blase attitude toward violence and disaster, the black humorist himself is not unpossessed of a tragic flaw, or so it seems upon a cursory reading of his work. For if his first main trick as caricaturist is distortion for “force value,” his second main trick, it appears, is oversimplification. He leaves out features not relevant to his purpose. Sex and violence, popular as subject matter with black humorists, are often portrayed so starkly that the entire composition is set out of key, the more “wholesome” aspects painted out with harsh “Red Light” tones (Cf. John Rechy’s “Miss Destiny: The Fabulous Wedding”), tones dappled blood-red (Cf. Thomas Pynchon’s “In Which Esther Gets a Nose Job”); tones which, though red, still, under the imposed optics of conventional morality, fade into the humorist’s wonted black.

All of which points up the question of intent. Surely, the black humorist does not color the world absurd, unattainable, and cruelly phantasmagoric, without some purpose, nor without a secret disbelief that man is really so bereft of hope; for what individual could, without hope, turn to writing and wax hortatory in a world gone mad? But speculations withstanding, pigeonholing the black humorist’s specific purpose is not an easy task. Broadly viewed, though, his distorting, his stark treating of “taboo’d” material, his erasing the line between fact and fantasy, and his oversimplifying, tend toward the satirist.

Now satirists hope to stir “righteous indignation” in their readers; the black humorist, however, aware of society’s complacency, often must settle for less. Any identifiable reaction is at the nether end of the response meter attuned to black humor; comprehension, leading to a remedy for a particular brand of sociopathy, is at the other end. In between lie for the writer: at worst, ostracism, because of “unseemly” material; at best, “big money” flung his way by a reading public that smiles at charmingly “naughty” intellectuals, that wants to believe that the very literary are very different from you and me. Living on the stipends paid by this public for its “kicks” is, for the shrewd writer, as easy as giving Candy to babies.

Violence and venery, then, are the principle ingredients of a marvelously vile brew (to switch metaphors again) called black humor. The brew comes bottled behind many labels, but it is essentially an emetic: steeped in exaggeration to high potency, it is administered in hopes of eliciting cascades of deeply-rooted prejudices, fetishes, and “hang-ups,” for the cure of the societal body.

Extant

To be
a dancer-beam that over water skipped
for just a night
awakening a morning-ray adrift
on gossamer shaft,
or dream of floating once
with unweighted arms delight
to embrace a crystal tone
(the final tone)
of a silver bell,
to be.
