Do you need to enhance your relationship?

Are you and your partner constantly arguing? Need something to make it stop? We might have found an answer. Come in for your free trial TODAY!

Studies have shown breathing in the compound containing oxytocin:

- Makes women calmer and friendlier
- Makes men more sensitive and positive during arguments
- Women have shown drops in the nervous system while men's increased
- Women were less aroused than men

If 100 free trials show positive results, the oxytocin nasal spray will be available in participating pharmacies!

Oxytocin Treatment for Males and Females in Serious Relationship

What is Oxytocin?

Oxytocin is a hormone that is made in the brain, in the hypothalamus, and it is transported to and secreted by the pituitary gland. It is generally known for its role in lactation and in childbirth but many are unaware of the other links including its role in partner bonding. In some cases it is referred to as the “trust hormone.” Other than trust, oxytocin can be linked to alleviating social fears, facilitating healing and reducing stress and depression.

Intranasal Oxytocin Therapy

Do you want a free trial? This is what we need from you before you arrive:

- Signed form of consent from both individuals
- Information sheet filled out (both sheets found on website)
- **MUST** be in a relationship that has been stable for a year or more (You don't have to be married)

Procedure:

- Couples choose a topic that causes conflict between them
- Couples will be given either 5 sprays of oxytocin or the placebo (administered intranasally)
- Couple will be put into a room for 45 minutes and recorded
- Their cheeks will be swabbed multiple times during the 45 minutes to check for compounds showing how the nervous system is reacting
- The couples actions will be recorded on paper while the study is going on
